Light snow plough

EN – the light snow plough from Schmidt:

Improved shape, more convenient to attach, more flexible in use!

If you're looking for a light snow plough that's both powerful and versatile in use for your communal winter service, then you'll be kept moving especially well with the EN from Schmidt. Thanks to an optimised blade shape and a new attachment design, this snow plough is designed based on the latest technical knowledge, is especially efficient and is optimally suited to all Aebi narrow track vehicles.

The new EN is extremely easy to mount – and very safe to use.

This new light snow plough is an uncomplicated device, which is easy and quick to attach thanks to the height-adjustable connection piece and is absolutely user-friendly in use – the new plough also possesses an automatic override system, which protects the device very efficiently from damages owing to suddenly-occurring obstacles. This guarantees availability and avoids unnecessary costs.

With a new blade shape – for even more efficient working!

The plough, which is equipped with a new blade shape and therefore works especially efficiently, is available in two variants, each with a different cutting blade length. The EN 13 measures 1,300 mm, while the EN 15 measures 1,500 mm. The plough height is 600 mm in both cases. Again, there are differences in terms of weight. The EN 13 weighs in at 100 kilograms and the EN 15 tips the scales at 110 kilograms – both are therefore designed to be lightweight.

Flexible in terms of basic equipment – and on fields, streets and paths, too.

The mechanical plough swivel, which can be operated from the rear, and optionally, a hydraulic swivel device, allow for plenty of flexibility in use. The plough possesses a swivelling angle of 35 degrees maximum to the left and right. In addition, it is equipped with a lateral inclination of plus/minus 10 degrees. Moreover, you can select between a height-adjustable sliding

plate and castors. The plough blade is manufactured from high-class quality steel; alternatively, cutting blades made from steel or plastic can be mounted – depending on the subsurface and snow proportions.

Light snow plough from Schmidt:

Quality, comfort and service that pay off for you!

LED side lamps, warning labels and warning flags can be supplied as an option. Moreover, there's no leeway in terms of our service, thanks to which you receive the best advice in all situations, without exception. We look forward to receiving your enquiry!
